

HBM-64

SERVICE MANUAL

Before utilizing the cartridge, please read this instructions thoroughly.

The HBM-64 64K byte RAM cartridge is used to expand the memory area of an MSX computer.

CARTRIDGE INSERTION

ADDRESS ASSIGNMENT FOR RAM AREA TO BE EXPANDED

The HBM-64 64K byte RAM is assigned to memory addresses from 0000H to FFFFH.

Notes

- When an MSX personal computer has 64K bytes of RAM, the BASIC user area or MSX-DOS program area cannot be expanded with the HBM-64.
- When an MSX personal computer has 32K bytes of RAM, the BASIC user area cannot be expanded but the MSX-DOS program can be used.
- Utilize the HBM-64 with software that controls the switching of the computer RAM and the HBM-64.

PRECAUTIONS

Power supply

Always turn the computer power supply off when inserting or removing a cartridge.

Cartridge handling

- Do not spill liquid on a cartridge, or do not insert or stick your fingers in the cartridge space.
- Do not cause an impact to a cartridge such as dropping or hitting it against something.
- Do not disassemble a cartridge.

Storage locations

Do not store a cartridge in the following places.

- A place with direct sunshine.
- Near a heater.
- A place with high humidity.
- Inside a car with the windows closed (especially in the summer time) since the temperature sometimes exceeds 100°C depending on the season which causes trouble or warps it.
- A dusty place.

SERVICE INFORMATION

Using HBM-64 Check ROM

1. Setup

- (1) Connect the HB-55P to the monitor and printer.
- (2) Remove the upper cabinet of the HB-55P.
- (3) Remove the firmware IC (IC44) from the main board of HB-55P.
- (4) When the firmware IC uses a mask ROM, connect an EPROM jumper (JW6) to the board.
- (5) Mount the check ROM (J-6206-100-A).

2. Test

- (1) Insert the testing HBM-64 in the MSX slot of the HB-55P.
- (2) Power on the HB-55P, monitor, and printer.
- (3) The following menu is displayed on the monitor:

```
*****
HBM-64 CHECK PROGRAM Ver 1.0
*****
```

PRINTER OFF

Wait time = 05sec

Max Pass count = ENDLESS

Select slot number (1~3) ?

- a) When the P key on keyboard is pressed, the printer is turned on. To output the monitor display onto the printer, turn the printer on.

Note:

If the P key is pressed with no printer connected, the check operation does not occur.

- b) Set the wait time by operating the cursor key UP/DOWN. The shorter the wait time, the sooner will the check operation be completed.
- c) Set the maximum pass count by operating the cursor key LEFT/RIGHT. This operation determines how many times the test is to be performed.
- d) Set the select slot number by a numeric key.
Cartridge slot A Set to 1.
Cartridge slot B Set to 3.

- (4) When the slot number is specified, the check operation gets started. The data is output to both monitor and printer at the same time.
- (5) When the following is displayed on the monitor, it indicates the termination of the check operation:

```
HBM-64 Memory check start !!
..... Check slot 1
```

```
Pass 0001 Start !
Total error 0000
```

```
***** HBM - 64 CHECK END *****
```

Total error 0000

- (6) If a data error is encountered in a check operation, the affected address and data are displayed. Correct the failing location accordingly.
- (7) The following is the display to be given if slot 3 is selected while the HBM-64 is inserted in slot A:

```
HBM-64 Memory check start !!
..... Check slot 3
```

```
Pass 0001 Start !
MEMORY ERROR !! error count 0001
at 0000H DATA 10101010 -> 11111111
MEMORY ERROR !! error count 0002
at 0001H DATA 10101010 -> 11111111
MEMORY ERROR !! error count 0003
at 0002H DATA 10101010 -> 11111111
MEMORY ERROR !! error count 0004
at 0003H DATA 10101010 -> 11111111
MEMORY ERROR !! error count 0005
at 0004H DATA 10101010 -> 11111111
```

.

.

.

Continued

3. Termination

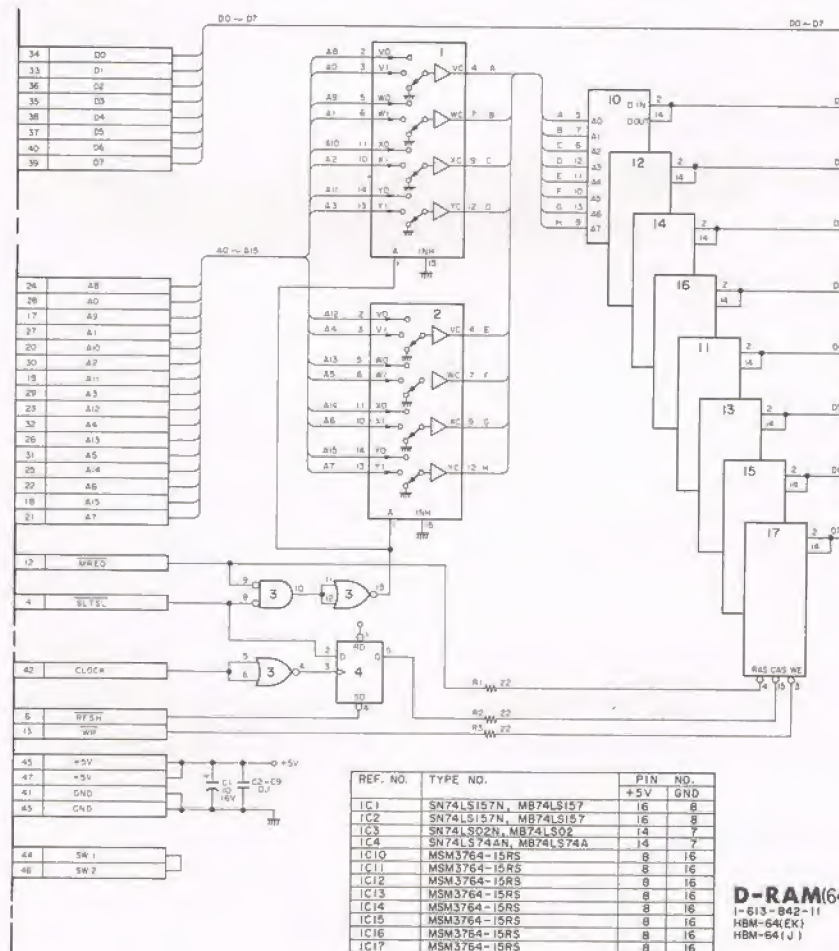

- (1) When the test has been completed, remove the EPROM jumper (JW6) from the board.
- (2) Remove the check ROM and connect the firmware IC.
